ASSAB 709
GENERAL

ASSAB 709 is an alloyed machinery steel with high strength in small and medium size. ASSAB 709 is supplied as quenched and hardened requiring no further heat treatment. However, it can be water, oil or polymer quenched to higher mechanical properties.

APPLICATIONS

ASSAB 709 is intended for use in the as-delivered condition, requiring no further heat treatment. However, it can be oil, water or polymer hardened to higher hardness and higher mechanical properties if required.

ASSAB 709 is suitable for flame and induction hardening and can also be nitried or tufrtrided to a surface hardness of 600-650 Vickers.

ASSAB 709 is not suitable for welding but can be repair welded when certain precautions are taken.

Typical applications include high strength machine parts, spindles, high strength bolts and studs, gears, axle shaft, crankshafts, connecting rods, arbors etc.

HEAT TREATMENT

Heat treatment for pre-hardened condition:
Hardened at 880-935°C
Tempered at 600-670°C
Quench media 100% water

ASSAB 709 can be re-hardened by oil, polymer or water to higher hardness. The following tempering diagram is achieved by induction heating followed by water quenching process.

Quenching in water after induction heating at 880°C
Choosing the right steel is of vital importance. ASSAB engineers and metallurgists are always ready to assist you in your choice of the optimum steel grade and the best treatment for each application. ASSAB not only supplies steel products with superior quality, we offer state-of-the-art machining, heat treatment and surface treatment services to enhance steel properties to meet your requirement in the shortest lead time. Using a holistic approach as a one-stop solution provider, we are more than just another tool steel supplier.

ASSAB and Uddeholm are present on every continent. This ensures you that high quality tool steel and local support are available wherever you are. Together we secure our position as the world’s leading supplier of tooling materials.
